

DESIGN NEW AIR

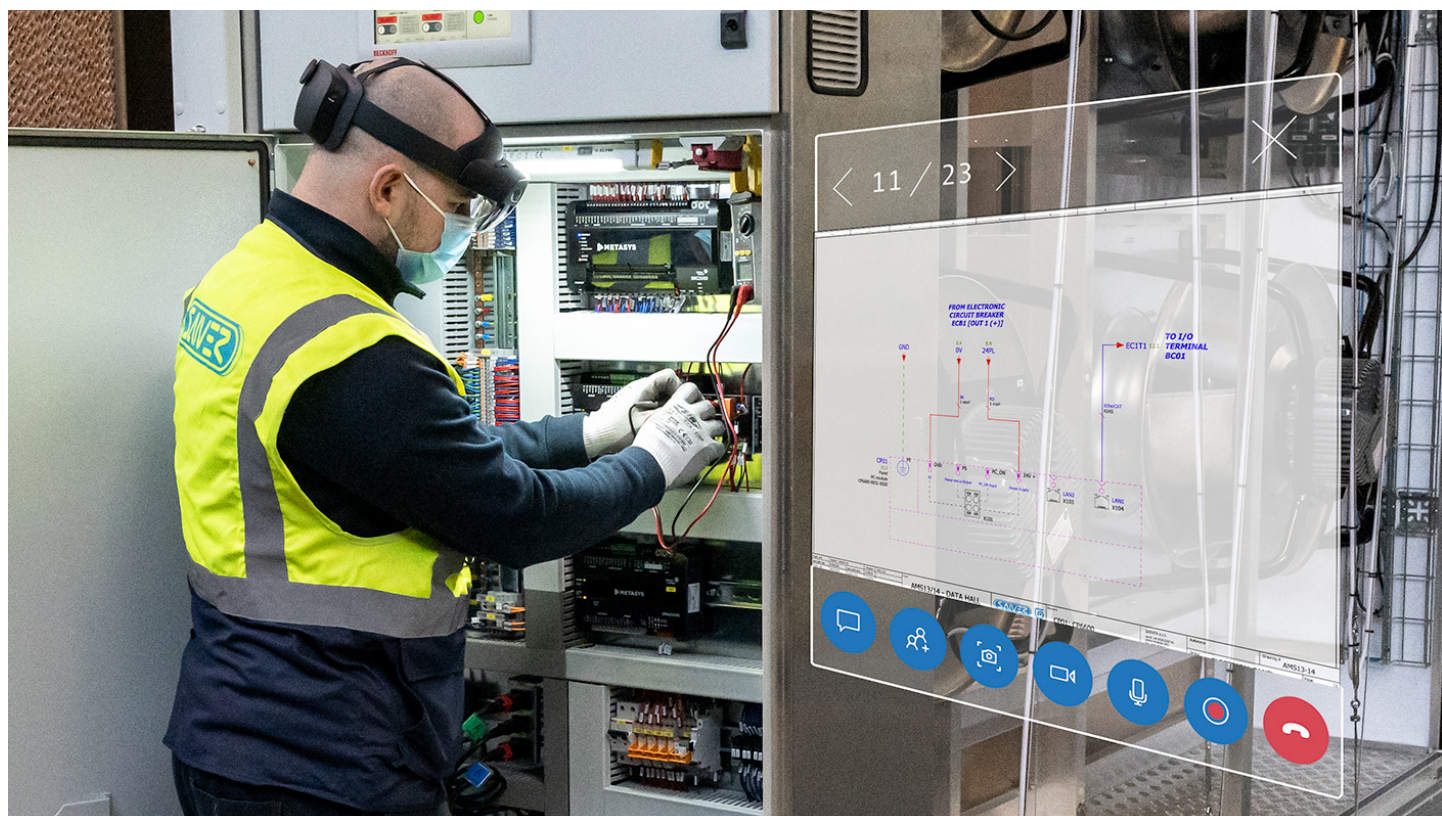

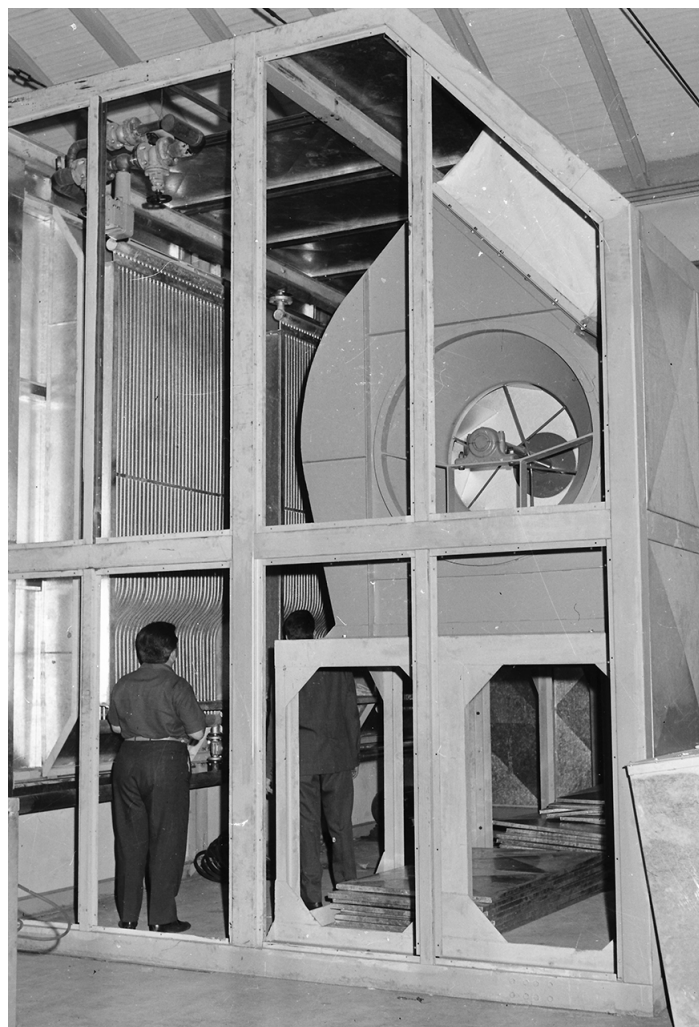

A Leading Manufacturer

Founded in 1959 by Carlo Garanzini and Mario Saita, Saiver was born as a ventilation systems company.

Evolving under the careful direction of the founders, the factory starts to produce air handling units (AHUs) as early as the 1960s

Saiver has always distinguished itself among AHUs manufacturers by implementing innovative methods to production.

Today Saiver uses Augmented Reality Technologies, such as Hololens®, to speed up the work and improve the performances.

BROAD PRODUCT RANGE

The AI Series

The AI Series Air Handling Unit is the culmination of experience, thanks to the company's Research and Development activity and a continuous improvement process.

The AIH Series

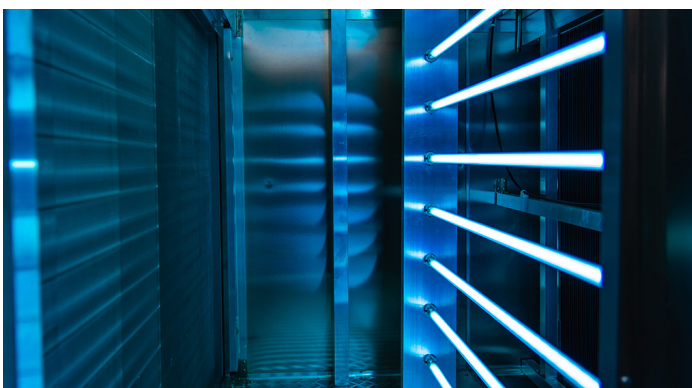

The Hygienic Series is specifically designed for use in all those environments that require sterile conditions.

The AIDC Series

The Series AI for Data Centers has been specifically designed to meet the needs of large IT data management centers.

Modular Data Centre

A Modular Data Centre is a portable method of distributing data center capacity, which can be placed wherever data management is required.

UVGI Lamps

UVGI lamps exploit the advanced technology of UV-C rays, which are able to eliminate pathogenic elements such as viruses and bacteria.

SOCIAL RESPONSIBILITY

2030 Agenda for Sustainable Development

Saiver's attention shifted to the quality of the air produced and the care for the environment.

Saiver cares about the safety of its employees and fully supports the goals of the **2030 Agenda for Sustainable Development**.
